Acknowledgments

The Little Data Book on Information and Communication Technology 2011 is the result of close collaboration between the staff of the Development Data Group of the Development Economics Vice Presidency and the Transport, Water, and Information Communication Technologies Department of the World Bank. The Development Data Group team included Azita Amjadi, David Cieslikowski, Federico Escaler, Buyant Erdene Khaltarkhuu, Alison Kwong, Jomo Tariku, and William Prince. The Global Information and Communication Technologies team included Kaoru Kimura, Marta Priftis, Christine Zhenwei Qiang and Helen Yang. We would also like to acknowledge the cooperation of the International Telecommunication Union on the use of its data. The work was carried out under the management of Shaida Badiee and Philippe Dongier. The book was typeset by Alison Kwong. Staff from External Affairs oversaw publication and dissemination of the book.

Preface

Since the late 1990s access to information and communication technologies has seen tremendous growth—driven primarily by the wireless technologies and liberalization of telecommunications markets. Mobile communications have evolved from simple voice and text services to diversified innovative applications and mobile broadband internet. The number of mobile cellular subscriptions reached approximately 4.7 billion globally, including people in remote and rural areas. The number of Internet users has risen constantly and now tops 1.8 billion people, with the number of broadband connections more than 470 million in 2009.

The impacts of information and communication technologies cross all sectors. Research shows that investment in information and communication technologies is associated with such economic benefits as higher productivity, lower costs, new economic opportunities, job creation, innovation, and increased trade and exports. Information and communication technologies also help provide better services in health and education and strengthen social cohesion.

The Little Data Book on Information and Communication Technology 2011 charts the progress of this revolution for 213 countries around the world. It provides comparable statistics on the sector for 2000 and 2009 across a range of indicators, enabling readers to readily compare countries.

This book includes indicators covering the economic and social context, the structure of the information and communication technology sector, sector efficiency and capacity, and sector performance related to access, usage, quality, affordability, trade, and applications. The *Glossary* contains definitions of the terms used in the tables.

Data notes

The data in this book are for 2000 and 2009 or the most recent year unless otherwise noted in the table or the *Glossary*.

- Growth rates are proportional changes from the previous year unless otherwise noted.
- Regional aggregates include data for low- and middle-income economies only.
- Italics indicate data for years or periods other than those specified.

Symbols used:

- .. indicates that data are not available or that aggregates cannot be calculated because of missing data.
- 0 or 0.0** indicates zero or small enough that the number would round to zero at the displayed number of decimal places.
- \$** indicates current U.S. dollars.

Data are shown for economies with populations greater than 30,000 or for smaller economies if they are members of the World Bank. The term *country* (used interchangeably with *economy*) does not imply political independence or official recognition by the World Bank but refers to any economy for which the authorities report separate social or economic statistics.

Income group tables

For operational and analytical purposes the World Bank's main criterion for classifying economies is gross national income (GNI) per capita. Every economy in *The Little Data Book on Information and Communication Technology* is classified as low income, middle income, or high income. Low- and middle-income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status.

Low-income economies are those with a GNI per capita of \$995 or less in 2009.

Middle-income economies are those with a GNI per capita of more than \$995 but less than \$12,196. Lower-middle-income and upper-middle-income economies are separated at a GNI per capita of \$3,945.

High-income economies are those with a GNI per capita of \$12,196 or more.

Euro area includes the member states of the Economic and Monetary Union of the European Union that have adopted the euro as their currency: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, Netherlands, Portugal, Slovak Republic, Slovenia, and Spain.
